

## New Alkè ATX 2020: now WLTP approved with up to 200 km autonomy

The new 2020 range of Alkè ATX electric utility vehicles is WLTP approved and thanks to a new lithium battery set-up can reach now up to 200 km of autonomy.

Padua, 31<sup>st</sup> January 2020 - Regulations evolve and Alkè, a pioneer in its category, has adapted to the WLTP procedure. The WLTP (world harmonized light-duty vehicles test procedure) is a global, harmonized standard for determining the levels of pollutants, CO2 emissions and fuel consumption of traditional and hybrid cars, as well as the range of fully electric vehicles. One of the main goals of the WLTP is to better match the laboratory estimates of fuel consumption and emissions with the measures of an on-road driving condition, taking into account not only different road traffic situations and speeds but also different equipment variants. The WLTP standard is going to be in very short time a compulsory requirement to be road legal in EU for most vehicle categories.

Alkè worked hard during 2019 to upgrade its ATX range to comply with this recent regulation. In addition to the WLTP upgrade, Alkè improved the battery compartment in new 2020 models, by upgrading the lithium battery set-up, that is now able to reach a new max autonomy of 200 km (the max autonomy of the previous range was 150 km). This is a great result and will help in dealing even better with the demanding conditions that Alkè electric vehicles must face during daily operations on different environments where they are applied.

### Alkè

Alkè is an Italian manufacturer of type-approved electric road vehicles used for transport, logistics and other multi-functional or special operations. It was established in 1992 and right from the first years it concentrated its efforts in the study and production of innovative vehicles for performance and, most of all, for the quality of their construction. Up to today Alke' vehicles are commercialised in more than 40 countries worldwide (Europe, Middle East, Asia, Australia, South America).

The entire range of Alkè vehicles can be viewed on the web site [www.alke.com](http://www.alke.com).
