

Alkè proposes an innovative and zero-emission waste collection

The version of Alkè ATX electric vehicles with waste collection body is designed for organizations that aim at eco-sustainability and reduction of atmospheric and acoustic pollution.

Padua, 31st January 2019 - There is much talk of smart cities that can **improve the quality of urban life** through activities that mainly involve the fields of mobility, the environment and energy efficiency. **A solution** in this sense is **provided by Alkè** with its ATX electric vehicles equipped with a waste collection body.

It is a configuration that meets the needs of companies and multiutilities that deal with waste collection and disposal, municipalities, historic centers, but also tourist villages/campsites, industrial plants, airports, railway stations, parks and green areas.

We are talking about full electric vehicles and therefore with **zero emissions and silent**, compact but at the same time robust and with high performance, with the possibility of being equipped with a body computer for **fleet management**. Made entirely in Italy by Alkè, a company with **over 25 years of experience** and an **international presence on the market**.

These vehicles allow **continuous operation 24/24h** depending on the type of batteries installed. Alkè waste collection vehicles are available with a 2.8 m³, 2.2 m³ or 1.7 m³ waste collection body for the COMBI versions that provide the possibility to combine the waste collection body with the tool box or the pressure washer. It is also possible to **reduce consumption** up to 30% in trips with frequent stop and go typical of waste collection operations, thanks to the high-performance electric motor and the regenerative brake system with which they are equipped.

Alkè

Alkè is an Italian manufacturer of type-approved electric road vehicles used for transport, logistics and other multi-functional or special operations. It was established in 1992 and right from the first years it concentrated its efforts in the study and production of innovative vehicles for performance and, most of all, for the quality of their construction. Up to today Alkè' vehicles are commercialised in more than 40 countries worldwide (Europe, Middle East, Asia, Australia, South America).

The entire range of Alkè vehicles can be viewed on the web site www.alke.com.

High resolution images are available on request.
