

Mixed configurations: the new born in the Alkè electric vehicles family

The range of configurations offered by the Italian company Alkè expands with the addition in the catalogue of new combinable solutions (COMBI bodies) to satisfy more needs with one vehicle

Padua, 5th Jun 2018 - The hundreds of configurations available for those who choose an Alkè electric vehicle further increase to get even closer to all the various needs of the market.

The 25 years of experience in the sector and the thousands of vehicles sold in more than 40 countries have pushed Alkè to design mixed configurations addressed to those who need to carry out multiple tasks but wants to do it with just one vehicle. These configurations (denominated COMBI by Alkè) are just based on the matching of two combinable applications for an optimal combined use.

Among the introduced novelties there are the storage box module and the high-pressure washer module, both combinable with the dropside body, the dropside body with steel mesh sides, the waste collection body or the tarpaulin body.

Alkè electric vehicles are characterized to be 100% made in Italy, zero emission and silent, without sacrificing quality, robustness and high performances. All the Alkè vehicles are N1 type approved for road circulation. In addition, there is the possibility to customize your own vehicle, not only choosing the configuration the more appropriate to your own needs but now also with the opportunity to match it with another combinable configuration. This solution is installable in all vehicles with long wheelbase version with the objective of simplifying tasks (as for example the street cleaning and waste collection activity) that would otherwise require two different vehicles.

Alkè

Alkè is an Italian manufacturer of type-approved electric road vehicles used for transport, logistics and other multi-functional or special operations. It was established in 1992 and right from the first years it concentrated its efforts in the study and production of innovative vehicles for performance and, most of all, for the quality of their construction. Up to today Alkè' vehicles are commercialised in more than 40 countries worldwide (Europe, Middle East, Asia, Australia, South America).

The entire range of Alkè vehicles can be viewed on the web site www.alke.com.
