

## **A new step forward from Alke: just launched the new ATX range 2019**

*New cutting-edge design and performances without compromises: here are specifications of these new electric vehicles 100% made in Italy*

Padua (Italy), 11<sup>th</sup> July 2018 - Alke presents the 2019 version of its ATX range of electric transport vehicles, today with a completely new design, concerning both exterior and interior. It is the third generation of a platform born 20 years ago and sold in more than 40 countries worldwide, proof of the solidity of its technical background and the experience of Alke as pioneer in the E-mobility professional sector, at European level and not only.

ATX 2019 models are type approved for road circulation in Europe as category N1, they are available in 5 different wheelbases and cab with 2 or 4 seats and can count on hundreds of configurations for the loading area.

These vehicles have a chassis capacity up to 1.600 kg, they can tow up to 2.000 kg in private area and up to 4.500 kg in public road, have a single charge autonomy up to 150 km and they can count on different battery types, such as Lithium with fast charge or multiple batteries with swap system.

From a technological point of view the new ATX range can be equipped with body computer that connects all the vehicle's devices to the Alke cloud platform for a real-time monitoring of the activities on board that allows remote diagnostics, also this in real-time, in case of anomalies.

The 2019 version of Alke ATX vehicles can be ordered by now and will see first deliveries from September 2018.

These vehicles will be produced in the recently renovated Alke Italian plant that has a surface of 11.000 m<sup>2</sup> and has been redesigned to increase significantly the production volumes in the next 24 months.

As in the past, also for the ATX 2019 Alke will continue to focus mainly Italian and European premium suppliers for its components, in order to guarantee always the highest quality standards in the manufacturing of its vehicles.

Alke has always been considered the reference producer in the high segment of the professional electric mobility sector and with this new range it aspires to make an additional move in this direction.

#### **Alke**

Alke is an Italian firm that produces electric type approved vehicles, used for transport, logistics and other multifunctional or special operations. Born in 1992, since the first years it focused on study and production of innovative vehicles concerning performances and, above all, construction quality. Today, Alke electric vehicles are sold in more than 40 countries worldwide (Europe, Middle East, Asia, Australia, South America).

The whole range of Alke vehicles can be viewed on the site [www.alke.com](http://www.alke.com).
